A Primer on Genetics, Genomics and Plant Breeding

Wilfred Vermerris

Genetics Institute and Agronomy department, University of Florida, Gainesville, FL, USA,
wev@ufl.edu

2.1 Introduction

The focus of this book, as the title indicates, is on the genetic improvement of bioenergy crops. Chapter 4 deals with the biochemistry and genetics of cell wall biosynthesis, and Chapters 7–15 focus on individual crops, with an emphasis on the breeding strategies that can be employed to improve these crops for bioenergy production. These chapters are written with the assumption the reader has basic knowledge of plant genetics and plant breeding. In order to make this book accessible to a broad audience, this primer is intended to provide basic background information on plant molecular genetics and plant breeding. The chapter is written for an audience with basic knowledge of biology and chemistry. Textbooks that offer a more detailed and extensive treatise on the various topics are referenced throughout the text. It should be possible to read the main Sections (2.2, 2.3, etc.) independently from each other.

These chapters are written with the assumption the reader has basic knowledge of plant genetics and plant breeding. In order to make this book accessible to a broad
