**Cover**

Brain development of children and adolescents and the environmental factors that impact development are featured on this issue's cover. Mackie et al. (p. 647) provided magnetic resonance images (left and right) from their study of cerebellar volumes in children with ADHD. DelBello et al. (p. 582) examined the 12-month outcome of bipolar adolescents following initial hospitalization for a manic or mixed episode. Original drawings of the subjects and synapses (center) are by Neil P. Mills, B.S., Research Assistant, Division of Bipolar Disorders Research, University of Cincinnati College of Medicine. Cover design by Jason Glance.
