Guide for Authors 2015

On the cover: Mae Moh power plant, a thermal power plant of The Electricity Generating Authority of Thailand (EGAT), uses abundant lignite from the Mae Moh District, Lampang Province, Northern Thailand, where it is located as fuel (photo credit ©EGAT 2013, Nonthaburi, with permission). In this issue, Khankham et al. compared the risk of coronary artery disease among patients with psoriasis using the Framingham Risk Score and the Ramathibodi–EGAT heart score derived from a study that followed a cohort of Thai employees of the EGAT for more than for more than 10 years.
