FEATURE ARTICLES

- 34** Pilot Study to Test the Effectiveness of Healing Touch on Agitation in People With Dementia

Kris L. Wang and Carol Hermann

Agitation occurs in approximately 90% of people with advanced dementia. This pilot study employed an energy-based therapeutic approach to healing that demonstrated a definite lowering of agitation. There is a need for further research in this area.

- 41** When the Report Is Dizziness

Mary Ann Johnson

The role of nursing is critical to document signs and symptoms of dizziness and to consider possible causes through observation and follow-up care.
