"At the time patients return to activity post–anterior cruciate ligament reconstruction, the results of this study indicate that physical function is, in large part, dependent on the magnitude of quadriceps force production."

PAGE 1024
"Our results suggest that a monophasic pulsed current with a relatively long pulse duration may be more therapeutically useful than burst-modulated alternating current for promoting strength gains."

RESEARCH REPORT
Validity and Reliability of the Dutch Version of the International Hip Outcome Tool (iHOT-12NL) in Patients With Disorders of the Hip
Martin Stevens, Inge van den Akker-Scheel, Bas ten Have, Marco Adema, Hilde Giesen, Inge H.F. Reininga

RESEARCH REPORT
Electrically Elicited Muscle Torque: Comparison Between 2500-Hz Burst-Modulated Alternating Current and Monophasic Pulsed Current
Wayne Scott, Cheryl Adams, Shantelle Cyr, Brianna Hanscom, Kevin Hill, Jeffrey Lawson, Colin Ziegenbein

RESEARCH REPORT
Effects of Neuromuscular Fatigue on Quadriceps Strength and Activation and Knee Biomechanics in Individuals Post–Anterior Cruciate Ligament Reconstruction and Healthy Adults
Abby C. Thomas, Lindsey K. Lepley, Edward M. Wojtys, Scott G. McLean, Riann M. Palmieri-Smith

MUSCULOSKELETAL IMAGING
Comminuted C2 Articular Pillar Fracture in a Patient With Multiple Sclerosis and Recurrent Falls
Josiah D. Sault, James M. Elliott
